

**SAP Note 1490525 - BAPI Err ME083 etc; MEREQX not clearing  
when held PReq saved**

---

Note Language: English

Version: 2 Validity: Valid Since 19.07.2010

**Summary**

**Symptom**

When processing Purchase Requisitions using BAPI\_PR\_CHANGE, you encounter errors like (but possibly not limited to):

```
ME          083          Enter Document Type
MEPO        080          Processing status invalid
even though the values for the fields document type (BSART) and processing
status (STATU) were correctly passed into the BAPI when it was called.
```

**Other terms**

me\_update\_requisition, ME51N, ME52N, ME53N, Hold

**Reason and Prerequisites**

This occurs for Purchase Requisitions that were Held at one time. As of Enhancement Pack 4 for ECC 600, held Requisition documents generate records in the new database table MEREQX. When these held documents are subsequently saved as complete, the records in MEREQX are not being deleted as they should. The presence of these records then leads to the errors in the BAPI.

**Solution**

Please apply the correction instructions below in order to have these records delete properly from MEREQX when a held PReq is saved.
